

Preparation for Fumigation with Vikane® Gas Fumigant

1. Remove from the structure to be fumigated: All food, feed, drugs and medicinals (including items in refrigerators and freezers) which are not in air tight containers (re: unopened jars, bottles and cans).
2. Baby Crib Mattresses must be removed. Pillows and mattresses with permanent plastic covers must also be removed.
3. Turn off all air conditioning units. All heating elements must be unplugged (pianos, organs, etc.).
4. All pilot lights to gas appliances must be extinguished. Turning the gas off is the responsibility of the customer. Please make arrangements with the gas company.
5. Electricity must be available, as it will be required to run fans during the fumigation.
6. Any automatic lighting system on the exterior of the structure must be turned off.
7. Retract all awnings, since only you know how to operate them.
8. Cut back shrubs and tree branches adjacent to the structure to prevent damage or burning. Allow enough space for the tent to fall freely to the ground. Tree limbs growing over the roof must be trimmed back. Thoroughly water the ground around the shrubs and plants located close to the structure. Rocks, gravel, mulch and wood chips must be raked back approximately 12" to 18" from the foundation to allow proper seal during fumigation.
9. People, pets, (including tropical fish) and living plants must be removed from the structure before fumigation begins.
10. Shut off automatic switch controls for appliances and lighting systems which are located within the space to be fumigated.
11. All cabinet doors, drawers, closet interior doors must be opened at least 3" to 4". The attic trap door must also be opened to insure proper fumigation and aeration of the structure.
- 12. THE COMPANY CANNOT BE RESPONSIBLE FOR STATIONARY METAL ROOFING IN PATIO OR CARPORT AREAS.**
13. When masking tape must be used for sealing purposes, we cannot assume responsibility for paint lifting when tape is removed.
14. The company will exercise due care in its fumigation procedures but will not be held responsible for broken roof tiles, gutters, under ground or above ground pipes, solar heaters, antennas, weather vanes, turbines, ornamentals or other inadvertent damage caused by properly performed procedures.
15. The law requires that all buildings be locked during fumigation. It is important that you make key arrangements with the company representative.
16. Screened areas and fences attached to the structure must be removed and replaced by the owner.
17. During fumigation and aeration procedures, the company will not be held responsible for vandalism, break-ins, or thefts. If you are concerned, we recommend that you obtain the services of a security guard company.
18. A fumigated structure must not be re-entered until it has been cleared and declared safe for entering.
19. Due to adverse weather conditions, job date may be rescheduled at the customers convenience. Above and Beyond Pest Control Inc. will not be held responsible for lodging or other expenses caused by such delays.
20. It is the customers responsibility to prepare the property and structure for the fumigation according to the specifics outlined in this form. Please read them over carefully and ask your Above and Beyond Pest Control Inc. representative for additional steps you should take.
21. If the structure is not properly prepared, Above and Beyond Pest Control Inc. reserves the right to add an additional charge for improper preparation.

UPON RE-ENTERING

1. No need to wash dishes, cookware, clothes or linens.
2. Discard any food items or medications that may have inadvertently been left inside during fumigation.
3. Because Vikane gas leaves no residual, any crawling insect can immediately enter the structure. Some homes experience an infestation of ants, which are attracted to the dead insects after fumigation.

I HEREBY ACKNOWLEDGE THAT I HAVE RECEIVED AND UNDERSTAND ALL THE INFORMATION LISTED IN THIS DOCUMENT.
